Seong-Jun Kang, Ph.D.

Immunologist working on protein-protein interaction blockade: binding measurement, antibody lead optimization, and single-cell readouts of what a candidate did

Postdoctoral Associate applicant · Keating Lab, MIT Department of Biology

101 Canal Street
Boston, MA 02114
(551) 239-0341
sjkang89@gmail.com

PROFESSIONAL STATUS

At PB Immune Therapeutics I ran the binding measurements for an anti-CD40 antibody program, and those numbers decided which candidate went into the animal studies. I was the manager and then the associate director on that program.

RESEARCH OBJECTIVE

to measure how tightly and how selectively a designed molecule binds its target, and to check that the number still holds when the assay, the species, or the batch changes.

SCIENTIFIC INTERESTS

protein-protein interaction blockade; affinity ranking and binding kinetics by SPR; epitope and competition analysis by ELISA; species cross-reactivity; antibody lead selection and optimization; cell-resolved readouts of what a candidate changed.

WHAT I WOULD BRING

- **Binding measurement.** I ran surface plasmon resonance on a Biacore instrument for an anti-CD40 antibody program. I used it to rank candidates by affinity, to confirm that the lead blocked the receptor, and to compare binding against human and non-human-primate antigen before the primate studies were designed. ELISA-based affinity and epitope work ran alongside it.
- **Running a lead-optimization program.** I was the manager and then the associate director on that program, from the candidate panel to a registered patent in 2024, on which I am a co-inventor. It had defined targets, funder milestones, and a delivery date.
- **CROs and core facilities.** I designed and placed external work, set the assay conditions, took delivery of the data, and made the call on what advanced. Non-human-primate studies in three species ran this way. I also ran multi-site sample QC and multi-PI coordination for a 700-donor atlas.
- **Protein-protein interaction blockade as the problem.** The anti-CD40 program was a CD40-CD40L blockade program. I also worked on a CABIN1-derived core peptide that inhibits calcineurin-mediated T-cell activation, where my part was the T-cell functional validation.
- **Reading out what a molecule did.** High-parameter flow cytometry, single-cell and spatial transcriptomics, and targeted plasma proteomics, used to show that a candidate changed what cells do.

EDUCATION

DEGREES

Ph.D. 2014–2023
Seoul National University, Seoul, Republic of Korea
Department of Biomedical Sciences
Thesis: Exploration of the Role of Regulatory T cells in Various Pathogenic Contexts
Advisor: Chung-Gyu Park, M.D., Ph.D.

M.S. 2012–2014
Seoul National University, Seoul, Republic of Korea
Department of Biomedical Sciences
Thesis: Enhanced LPS-Induced Monocyte Activation by Recombinant Human Soluble CD14
Advisor: Chung-Gyu Park, M.D., Ph.D.

B.S. 2008–2012
Sungkyunkwan University, Suwon, Republic of Korea
Department of Genetic Engineering

RESEARCH & PROFESSIONAL EXPERIENCE

Researcher (postdoctoral)
2025–present

Yonsei University Wonju College of Medicine · Dept. of Physiology / Organelle Medicine Research Center, Wonju, Republic of Korea
Deep-learning multimodal-integration models fusing imaging, transcriptomic, and clinical data into single predictive models.

Associate Director
2023–2025

PB Immune Therapeutics Inc. · Dept. of Basic Research, Seoul, Republic of Korea
Led a humanized anti-CD40 antibody program: candidate ranking by **surface plasmon resonance (Biacore)** and ELISA, receptor-blocking confirmation, human and non-human-primate cross-reactivity, in vivo efficacy in primates, and the regulatory documentation. Placed and oversaw CRO and core-facility work, from study design and assay conditions through data delivery and go/no-go calls. Built the in-house single-cell and spatial analysis pipeline. Ran cynomolgus and marmoset EAE studies for multiple sclerosis programs.

Manager
2021–2023

PB Immune Therapeutics Inc. · Dept. of Basic Research, Seoul, Republic of Korea
Wrote the two KDDF proposals that funded the anti-CD40 program and ran the lead-selection work under them.

Research Student
2020–2023

SCAID, Single Cell Atlas of Immune Diseases, Genomic Medicine Institute, Seoul National University, Seoul, Republic of Korea
Contributed the founding proposal; executed within the funded program (700+ donors × 8 organs): milestone tracking, multi-site QC, multi-PI coordination.

Researcher
2019–2021

Xenotransplantation Research Center, Seoul National University, Seoul, Republic of Korea
Rhesus macaque tissue processing and longitudinal immune monitoring across transplantation studies.

Teaching Assistant
2014–2016

Seoul National University College of Medicine · Dept. of Microbiology and Immunology, Seoul, Republic of Korea

TECHNICAL SKILLS

Binding & protein interaction

Surface plasmon resonance (Biacore) run hands-on for antibody lead work: association and dissociation rates, affinity ranking across a candidate panel, receptor-blocking confirmation, and human / non-human-primate cross-reactivity. **ELISA**-based affinity and epitope analysis; competition binding. Antibody lead selection and optimization from candidate panel to registered patent. Functional validation of a peptide inhibitor of calcineurin in primary human T cells (CABIN1 core peptide, *Exp Mol Med* 2022).

Program & external execution

CRO and core-facility work from study design and placement through data delivery and go/no-go calls; assay conditions specified to the vendor; regulatory documentation for a therapeutic antibody program; funder milestones and reporting; multi-site sample QC across a 700-donor collection.

Immunological assays

High-dimensional flow cytometry (panels up to 24 markers); multiplex panel design; 10-color 6-way FACS. **Olink** targeted plasma proteomics (immune & neurology panels). Primary human T-cell isolation, expansion and functional assays; monocyte and dendritic-cell differentiation; mesenchymal stem cell culture. Enzymatic tissue digestion, Percoll enrichment, cell and nucleus isolation.

Single-cell / spatial / multi-omic

scRNA-seq, scTCR-seq, snRNA/snATAC; 10× 5'/3' library generation and **10× Chromium Connect** automated preparation. **Seurat, Scanpy, Squidpy, Monocle3, CellChat/NicheNet**; scVI/scANVI, batch integration, **consensus NMF**; Milo KNN-graph differential abundance, GLIPH, InferCNV. Custom UMI-aware, BAM-level isoform analysis code (Python). Spatial: **GeoMx DSP** run end to end, **Visium**, **MACSima** cyclic multiplexed immunofluorescence.

Computational — Python: scikit-learn, XGBoost/LightGBM/CatBoost, **PyTorch**; AUC-validated classifiers held out on independent cohorts; multimodal deep-learning integration (imaging + transcriptomic + clinical). Linux servers · R/RStudio · Git-based reproducible analysis.

LLM and vision-language models — **Finetuning.** LoRA adaptation of an open vision-language model (**Gemma 4 12B**, mlx-vlm) so that an amyloid pathology tile returns a structured JSON reading. The output schema is enforced during decoding, and the split is held out at the case level, checked on every run. Against the same model zero-shot on 800 held-out tiles, cored-plaque F1 went from 0.12 to 0.44 and cerebral amyloid angiopathy from 0.00 to 0.69. **Retrieval and agents.** A retrieval-augmented question-answering service written end to end: corpus chunking, BM25 and dense-vector retrieval fused by reciprocal rank, query expansion, and streamed answers that carry their sources. **FastAPI**, containerized, running on **Google Cloud Run**. It answers questions about this CV at kangseongjun.com.

Microscopy & animal models — Spinning-disk confocal (Nikon CSU-W1 SORA), point-scanning confocal (Leica SP8), two-photon; IHC/IF (frozen & FFPE) with quantitative image analysis. Non-human primates across three species (rhesus, cynomolgus, marmoset), including EAE and islet-transplantation studies; mouse immune profiling.

All grants were held by the institutional Principal Investigator (Ph.D. advisor at SNU; company CEO/CSO at PB Immune Therapeutics); the listed roles reflect the applicant's contribution to proposal writing and project execution, ***not as PI****. Budgets converted at ≈ ₩1,400 / USD.*

RESEARCH INTERESTS

- **Measuring protein–protein interactions well enough to decide with.** Affinity and kinetics that hold across instruments, batches, and species, and assay panels built so that candidates can be compared week to week.
- **Blocking an interaction and showing that it was blocked.** Receptor-blocking and competition assays read out against what the cells then do.
- **Taking a molecule from a candidate panel to a decision.** Lead selection and optimization on a fixed timeline, with external work placed at CROs and core facilities.
- **Cell-resolved readouts of an intervention.** Single-cell transcriptomics, high-parameter flow cytometry, and targeted proteomics used to check what a candidate changed in a tissue.
- **Keeping donor, batch, and run structure separate from biology.** Study design, pooling and demultiplexing, and models checked on data they were not fitted on.

AWARDS, PATENTS & SCHOLARSHIPS

PATENTS

2024 **Antagonistic Anti-CD40 Humanized Antibody.** Republic of Korea, Appl. No. 10-2024-0085972; registered 2024-07-01. Co-inventor.

2019	**Immunosuppression Composition Comprising JAK Inhibitor.** Republic of Korea, Appl. No. 10–2014–3490000; registered 2019–08–20.

AWARDS

2024	**Grand Prize**, 2024 GPTers AI Hackathon (Project GAIA Team)
2023	**Grand Prize**, SBA Smart Workathon (Work Process Innovation)
2017	**Best Poster Award**, American Transplant Congress, Chicago · **Best Presentation Award**, Korean Association of Immunologists

SCHOLARSHIPS

2014–2020	NRF Research Scholarship for Ph.D. Candidates · Dean's Lecture & Research Support Scholarship, SNU College of Medicine · BK21 Plus Research Scholarship

SELECTED PRESENTATIONS

Poster KAI Annual Meeting, Incheon (2022) · Cytokine, Hawaii (2022) · American Transplant Congress, Chicago (2017) · The Transplantation Society, Hong Kong (2016) · IPITA/IXA/CTS, Melbourne (2015) · TREG, Shanghai (2012)
