PROFESSIONAL STATUS

I measure molecular composition in intact samples, one unit at a time, and I check that the result holds on data the model has not seen. The unit has been a cell or a tissue region.

RESEARCH OBJECTIVE

to carry multiplexed in situ measurement into new model systems, and to keep donor and batch structure separated from biology while doing it.

SCIENTIFIC INTERESTS

multiplexed protein and RNA detection in situ (GeoMx, Olink, MACSima, 24-color flow); binding measurement by SPR and ELISA; consensus NMF for cell-state programs; isoform-level calling from short reads; multi-donor study design; calibrated models checked on held-out data.
