

Seong-Jun Kang, Ph.D.

Immunologist working in multiplexed protein and RNA measurement, in situ and at single-cell scale

Postdoctoral Associate applicant · Bathe Lab, MIT Department of Biological Engineering (Job Number 25864)

101 Canal Street

Boston, MA 02114

(551) 239-0341

sjkang89@gmail.com

PROFESSIONAL STATUS

I measure molecular composition in intact samples, one unit at a time, and I check that the result holds on data the model has not seen. The unit has been a cell or a tissue region. I was the manager and then the associate director at PB Immune Therapeutics, where I built the in-house single-cell and spatial analysis pipeline.

RESEARCH OBJECTIVE

to carry multiplexed in situ measurement into human iPSC-derived models at screening scale, and to keep donor and batch structure separated from biology while doing it.

SCIENTIFIC INTERESTS

multiplexed protein and RNA detection (GeoMx and MACSima in situ; Olink plasma; 24-color flow); high-content image analysis, segmentation and feature extraction; consensus NMF for cell-state programs; isoform-level calling from short reads; multi-donor study design; calibrated models checked on held-out data.

WHAT I WOULD BRING

- **Multiplexed in situ measurement.** My closest experimental experience is cyclic multiplexed immunofluorescence with MACSima, high-parameter fluorescence panel design, and confocal microscopy. I have also worked with GeoMx spatial transcriptomics and Olink protein panels. These methods gave me experience with multiplexed marker panels, assay quality control, spatially indexed molecular measurements, and variation across runs. PRISM-specific antibody-oligonucleotide conjugation and probe exchange, neuronal culture, and the liquid-handling automation would be new methods for me.
- **Reproducing the assay first.** In the Bathe Lab, I would first reproduce the established PRISM assay and image-analysis workflow. I would validate barcoded-marker staining against standard immunofluorescence, check probe removal between rounds, register images across rounds, and use the lab's CellProfiler pipeline to identify dendrites, segment synaptic puncta, and quantify proteins at each synapse.
- **Multi-donor and batch structure.** In the PDE4D study I pooled four donors per lane and demultiplexed by SNP, so donor and sequencing run were not confounded. In SCAID I ran the multi-site quality control across more than 700 donors and eight organs. I test at the donor level. I would set up the analysis so that donor, differentiation batch, plate, and imaging round stay separable from the response.
- **Cell-state programs, checked on held-out data.** I use consensus NMF to find composition programs that repeat across batches rather than in a single run. In the PDE4D study the resulting Th1.17 program held up across the SCAID atlas of 702 samples. A classifier built on subset composition reached a held-out AUC of 0.780 for arthritis. The part I would want to own here is a per-synapse call with a confidence attached to it.
- **Program execution and grant writing.** At PB Immune Therapeutics I built the internal single-cell, spatial, and proteomic analysis capability and ran marmoset and cynomolgus studies for multiple sclerosis programs, including a humanized anti-CD40 antibody that reached a registered patent in 2024. I wrote the industry proposals behind that work, about \$1.3 million across five grants and lead writer on four of them, always under the institutional PI and not as PI, and then ran the projects. K99/ROO and LSRF are open to me, and I would apply within the first two years.

EDUCATION

DEGREES

Ph.D. **Seoul National University, Seoul, Republic of Korea**
2014–2023 Department of Biomedical Sciences
Thesis: Exploration of the Role of Regulatory T cells in Various Pathogenic Contexts
Advisor: Chung-Gyu Park, M.D., Ph.D.

M.S. **Seoul National University**, Seoul, Republic of Korea
2012–2014 Department of Biomedical Sciences
Thesis: Enhanced LPS-Induced Monocyte Activation by Recombinant Human Soluble CD14
Advisor: Chung-Gyu Park, M.D., Ph.D.

B.S. **Sungkyunkwan University**, Suwon, Republic of Korea
2008–2012 Department of Genetic Engineering

RESEARCH & PROFESSIONAL EXPERIENCE

Researcher (postdoctoral) **Yonsei University Wonju College of Medicine** · Dept. of Physiology / Organelle Medicine Research Center, Wonju, Republic of Korea
2025–present Deep-learning multimodal-integration models fusing imaging, transcriptomic, and clinical data into single predictive models.

Associate Director **PB Immune Therapeutics Inc.** · Dept. of Basic Research, Seoul, Republic of Korea
2023–2025 Led a humanized anti-CD40 antibody program: candidate ranking by **surface plasmon resonance (Biacore)** and ELISA, receptor-blocking confirmation, human and non-human-primate cross-reactivity, in vivo efficacy in primates, and the regulatory documentation. Placed and oversaw CRO and core-facility work, from study design and assay conditions through data delivery and go/no-go calls. Built the in-house single-cell and spatial analysis pipeline. Ran cynomolgus and marmoset EAE studies for multiple sclerosis programs.

Manager **PB Immune Therapeutics Inc.** · Dept. of Basic Research, Seoul, Republic of Korea
2021–2023 Wrote the two KDDF proposals that funded the anti-CD40 program and ran the lead-selection work under them.

Research Student **SCAID, Single Cell Atlas of Immune Diseases**, Genomic Medicine Institute, Seoul National University, Seoul, Republic of Korea
2020–2023 Contributed the founding proposal; executed within the funded program (700+ donors × 8 organs): milestone tracking, multi-site QC, multi-PI coordination.

Researcher **Xenotransplantation Research Center, Seoul National University**, Seoul, Republic of Korea
2019–2021 Rhesus macaque tissue processing and longitudinal immune monitoring across transplantation studies.

Teaching Assistant **Seoul National University College of Medicine** · Dept. of Microbiology and Immunology, Seoul, Republic of Korea
2014–2016

TECHNICAL SKILLS

Multiplexed in situ detection and imaging **GeoMx DSP** run end to end — slide preparation, oligonucleotide-barcoded probe hybridisation, immunofluorescence staining, fluorescence-guided ROI selection, instrument operation, UV cleavage and barcode collection. **MACSima** cyclic multiplexed immunofluorescence, iterative stain-image-erase rounds on one section. **Olink** targeted plasma proteomics; **Visium** spatial transcriptomics. High-parameter fluorescence panel design up to 24 markers. **Spinning-disk confocal (Nikon CSU-W1 SORA)** with quantitative image analysis.

High-content image and data analysis Segmentation, feature extraction and model scoring on public iPSC-neuron imaging screens. Batch- and donor-aware modelling, held-out evaluation, calibrated confidence. Automated library preparation on **10x Chromium Connect**.

Binding & protein interaction	Surface plasmon resonance (Biacore) run hands-on for antibody lead work: association and dissociation rates, affinity ranking across a candidate panel, receptor-blocking confirmation, and human / non-human-primate cross-reactivity. ELISA -based affinity and epitope analysis; competition binding. Antibody lead selection and optimization from candidate panel to registered patent. Functional validation of a peptide inhibitor of calcineurin in primary human T cells (CABIN1 core peptide, <i>Exp Mol Med</i> 2022).
Program & external execution	CRO and core-facility work from study design and placement through data delivery and go/no-go calls; assay conditions specified to the vendor; regulatory documentation for a therapeutic antibody program; funder milestones and reporting; multi-site sample QC across a 700-donor collection.
Immunological assays	High-dimensional flow cytometry (panels up to 24 markers); multiplex panel design; 10-color 6-way FACS. Olink targeted plasma proteomics (immune & neurology panels). Primary human T-cell isolation, expansion and functional assays; monocyte and dendritic-cell differentiation; mesenchymal stem cell culture. Enzymatic tissue digestion, Percoll enrichment, cell and nucleus isolation.
Single-cell / spatial / multi-omic	scRNA-seq, scTCR-seq, snRNA/snATAC; 10x 5'/3' library generation and 10x Chromium Connect automated preparation. Seurat , Scanpy , Squidpy , Monocle3 , CellChat/NicheNet ; scVI/scANVI, batch integration, consensus NMF ; Milo KNN-graph differential abundance, GLIPH, InferCNV. Custom UMI-aware, BAM-level isoform analysis code (Python). Spatial: GeoMx DSP run end to end, Visium , MACSima cyclic multiplexed immunofluorescence.
Computational	Python: scikit-learn, XGBoost/LightGBM/CatBoost, PyTorch ; AUC-validated classifiers held out on independent cohorts; multimodal deep-learning integration (imaging + transcriptomic + clinical). Linux servers · R/RStudio · Git-based reproducible analysis.
Microscopy & animal models	Spinning-disk confocal (Nikon CSU-W1 SORA), point-scanning confocal (Leica SP8), two-photon; IHC/IF (frozen & FFPE) with quantitative image analysis. Non-human primates across three species (rhesus, cynomolgus, marmoset), including EAE and islet-transplantation studies; mouse immune profiling.

SELECTED PUBLICATIONS · FIRST / CO-FIRST AUTHOR

- 2026** Woogil Song*, **Seong-Jun Kang***, Taehee Stella Kim*, Seyoung Jung, Sung Hee Kim, Su Chan Park, Sung Hae Chang, Eun Young Lee, Tae-Gyun Kim, Hyun Je Kim, Jeong Seok Lee. "Conserved PDE4D short-isoform bias defines pathogenic Th1.17 state across human inflammatory diseases." *Nature Immunology*. IF 27.7 in revision
- First author (co-first). Design* — four matched cohorts (healthy control, psoriasis, rheumatoid arthritis, ankylosing spondylitis), 16 donors each, n = 64; memory CD4⁺ T enrichment by negative selection, 4-plex pooling with SNP demultiplexing so donor and sequencing run are not confounded; 5' scRNA-seq with paired TCR. 251,055 memory CD4⁺ T cells. *Analysis* — built custom UMI-aware, BAM-level code (Python) resolving PDE4D short- vs long-isoform identity from 5' reads, which standard count matrices cannot separate; consensus NMF (k = 14 → 12 programs); scRNA + scTCR + snATAC + STAT3 ChIP-seq integration; Milo KNN-graph differential abundance; condition classifier on Th1.17 subset composition — arthritis AUC 0.780 (95% CI 0.665–0.896), healthy control 0.771, psoriasis 0.806. *Generalisation* — the PDE4D-high Th1.17 state was conserved across the SCAID atlas (702 samples, 23 immune diseases) and in independent SLE and arthritis synovial-fluid datasets. *Causal test* — short-isoform overexpression (PDE4D1/2/6) raised the IFN-γ⁺IL-17A⁺ fraction while the long isoform PDE4D5 did not; the PDE4D-selective inhibitor zatolmilast lowered it.

- 2025** **Seong-Jun Kang***, Yong-Hee Kim*, Thuy Nguyen-Phuong*, Yijoon Kim, Jin-Mi Oh, Jae-chun Go, DaeSik Kim, Chung-Gyu Park, Hyunsu Lee, Hyun Je Kim. "Immune cell-enriched single-cell RNA sequencing unveils the interplay between infiltrated CD8⁺ T resident memory cells and choroid plexus epithelial cells in Alzheimer's disease." *Journal of Neuroimmunology*. IF 2.9 [Download PDF](#)
First author (co-first). Built the complete brain-immune single-cell analysis path (whole-brain harvest → enzymatic digestion → Percoll enrichment → FACS → 10× → analysis); identified exhausted CD8⁺ tissue-resident memory T cells engaging choroid-plexus epithelium (↑ MHC-I and interferon-stimulated genes) at the blood-CSF barrier. 11,587 cells, 10 immune populations.
- 2025** **Seong-Jun Kang***, Jeong-Ryeol Gong*, Seon-Pil Jin, Jin-Mi Oh, Hyunjin Jin, Yuji Lee, Yewon Moon, Dongjun Kim, Hyo Jeong Nam, Hyun Seung Choi, Sanha Hwang, Yun Jung Huh, Kyung Yeon Han, Jihwan Moon, Jongsuk Chung, Woong-Yang Park, Chung-Gyu Park, Hyun Je Kim, Jeong Eun Kim. "Deciphering Dysfunctional Regulatory T Cells in Atopic Dermatitis." *Allergy*. IF 12.6 [Download PDF](#)
First author (co-first). Single-cell and functional dissection of dysfunctional skin-homing (CLA⁺) regulatory T cells in atopic dermatitis; OX40 (TNFRSF4) up-regulated alongside impaired suppressive function.
- 2024** Jong-Min Kim*, **Seong-Jun Kang***, So-Hee Hong*, Hyunwoo Chung, Jun-Seop Shin, Byoung-Hoon Min, Hyun Je Kim, Jongwon Ha, Chung-Gyu Park. "Long-term control of diabetes by tofacitinib-based immunosuppressive regimen after allo-islet transplantation in diabetic rhesus monkeys that rejected previously transplanted porcine islets." *Xenotransplantation*. IF 3.9 [Download PDF](#)
First author (co-first). Long-term diabetes control with a tofacitinib-based regimen after allo-islet transplantation in rhesus macaques; longitudinal immune monitoring.
- 2022** Youngkyoung Lim*, **Seong-Jun Kang***, Beom Keun Cho, Hyun Je Kim, ... Chong Hyun Won, Chung-Gyu Park. "Intra-tumoral heterogeneity and immune escape of melanoma arising from congenital melanocytic nevus revealed by spatial gene expression profiling." *JEADV*. IF 9.2 [Download PDF](#)
First author (co-first). Ran the GeoMx DSP workflow end to end — assay setup and instrument operation, immunofluorescence staining (S100B / CD3ε / nuclei), fluorescence-guided ROI selection and imaging, barcode collection, then the image and spatial-transcriptomic analysis. **Design** — one stage-IIC melanoma arising from a 4 cm congenital melanocytic nevus, segmented into four regions by invasion depth (M1-M4, 300 → 4,200 μm Breslow), four whole-transcriptome ROIs per region, 16 ROIs total, 18,677 genes. 2,067 differentially expressed genes (11.07%) at P < 0.0005; graded loss of HLA class I/II with depth, and B2M loss confirmed by immunohistochemistry.
- 2019** Jong-Min Kim*, Jun-Seop Shin*, Byoung-Hoon Min*, **Seong-Jun Kang***, Il-Hee Yoon, Hyunwoo Chung, Jiyeon Kim, Eung-Soo Hwang, Jongwon Ha, Chung-Gyu Park. "JAK3 inhibitor-based immunosuppression in allogeneic islet transplantation in cynomolgus monkeys." *Islets*. IF 2.2 [Download PDF](#)
Co-first author; one of four authors marked as contributing equally. JAK3-inhibitor-based immunosuppression in allogeneic islet transplantation in cynomolgus macaques.

CONTRIBUTING AUTHOR

Kangsan Roh*, Sabyasachi Das*, **Seong-Jun Kang**, Olga Barreiro, Rodrigo Javier Gonzalez, Timothy P. Padera, Shraddha Shirguppe, Ahlim Lee, Youngju Song, Pazhanichamy Kalailingam, Claire E. Fong, Aarushi Gandhi, Meehyun Kim, Diana Tambala, Adam Vernon Crain, Casey A. Maguire, Ulrich H. Von Andrian, Christian L. Lino Cardenas, Sekeun Kim, Benjamin P. Kleinstiver, Mark E. Lindsay, Patricia L. Musolino, Rajeev Malhotra. "In-vivo base editing of ACTA2 R179H restores lymphatic function and immune cell homeostasis in a murine model of Multisystemic Smooth Muscle Dysfunction Syndrome (MSMDS)." In preparation

Co-author (immunology). Performed the plasma proteomics analysis (Olink immune & neurology panels, 12 patients vs 6 controls), showing broad down-regulation of lymphoid regulators (LTβR, BAFF) and leukocyte-adhesion molecules, with dimensionality reduction separating patients from controls; complemented by flow-cytometry immunophenotyping of lymph-node leukocytes (germinal-center B cells GL7*B220*).

RESEARCH GRANTS & FUNDING

INDUSTRY · PB IMMUNE THERAPEUTICS (MANAGER → ASSOCIATE DIRECTOR)

FUNDING AGENCY / SPONSOR	PROJECT	PERIOD	BUDGET (USD)	ROLE / CONTRIBUTION
Korea Drug Development Fund (KDDF)	Lead selection and optimization of a therapeutic anti-CD40 antibody for the treatment of multiple sclerosis	2021–2023	~\$571,000	Lead proposal writer (>90% of proposal & execution)
Korea Drug Development Fund (KDDF)	Evaluation of drug efficacy and discovery of pharmacodynamic biomarkers of a new anti-CD40 antibody lead compound (PB101) for the treatment of pemphigus vulgaris	2022–2024	~\$321,000	Lead proposal writer (>90% of proposal & execution)
Ministry of SMEs and Startups (MSS)	Scale-up Funding for Tech Commercialization	2022–2023	~\$222,000	Lead proposal writer; managed >90% of execution
Ministry of SMEs and Startups (MSS)	Early-stage startup R&D: anti-CD40 biologic (PB-40N) to prevent anti-drug antibodies	2021–2022	~\$74,000	Lead proposal writer & core researcher
NAVER Corporation	Fundamental therapeutic strategy for immune-mediated diseases using engineered Tregs (PB20X_Treg)	2023–2026	~\$128,000	Proposal & study design (~50%)

DOCTORAL TRAINING · SEOUL NATIONAL UNIVERSITY

FUNDING AGENCY / SPONSOR	PROJECT	PERIOD	BUDGET (USD)	ROLE / CONTRIBUTION
Ministry of Science and ICT (MSIT) · Bio & Medical Technology Development Program	Establishing a meta-platform for discovering molecular targets by building a multi-layered immune-disease single-cell map (A9–22–1–05; SCAID, Single-cell Atlas for Immunological Disease)	2022–2028 (3+3)	~\$1.6M	Participated in proposal writing (>30%)
Ministry of Education (MOE) & Ministry of Science and ICT (MSIT)	Laboratory–Specialized Tech–Transfer & R&BD Grant	2020–2021	~\$40,000	Grant writing, experimental design & technical validation

All grants were held by the institutional Principal Investigator (Ph.D. advisor at SNU; company CEO/CSO at PB Immune Therapeutics); the listed roles reflect the applicant's contribution to proposal writing and project execution, **not as PI**. Budgets converted at ≈ ₩1,400 / USD.

RESEARCH INTERESTS

- Reading immune cell state from incomplete single-cell data.** Cell-state calling under ambiguity, isoform and transcript resolution from short reads, and embedding representations of cells, with calibrated confidence.
- Multi-modal integration of molecular identity.** Transcriptome, chromatin, spatial, imaging, and proteome into cell-state-resolved models.

- **Neuro-immune interactions in neurodegeneration.** T cells, microglia, and the blood-CSF barrier in Alzheimer's and related disease; ligand-receptor cross-talk and clonal/repertoire structure.
- **Building and checking computational analysis paths.** Custom callers, reproducible end-to-end analysis code, and comparison against domain ground truth.
- **Atlas-scale single-cell analysis across diseases and species.** Large multi-donor atlases (SCAID), cross-disease meta-analysis, and NHP-to-human translation.
